

Accessing the Loft

IMPORTANT: Requires 2 people at all times

1

Place ladder flat on the floor and have one person foot the base whilst the second lifts the ladder into the vertical position.

2

Undo the clips at the base and separate the 2 widest ladder sections until the tapes are taut. Fix in place the bracket that holds the 2 lower sections apart ensuring it is properly attached.

3

With the folding doors open, site the ladder so that you can go up it and open the loft door. (Note: Second person footing the ladder)

4

Move the ladder as close to the doorway as possible and raise the extension so that it projects into the doorway and ensure it is fixed in place. Ascend the ladder and step into the loft space using the safety handle highlighted.

Ladder Storage

Ladder storage – fold the ladder and ensure tapes are not left loose and replace the ladder on wall hooks. (Ladder stores inwards – i.e. thinnest section over the wall brackets).
